

## What are **Spectrum** Laser/IPL treatments?

Laser and Intense Pulsed Light (IPL) treatments can alleviate multiple dermatologic conditions. The Spectrum delivers wavelength specific pulses of energy to the desired treatment area. Discomfort is minimal and is usually compared to the "snap of a rubber band". Multiple treatments may be required to achieve your desired result.

The Spectrum is safe, effective, and can be applied to most skin types. Consult with your physician or skin care specialist about the right treatment for you.

# Restore Your Skin

## Goodbye Spider Veins & Age Spots

Over time, the outer skin can become discolored with pigmented lesions (brown spots) and broken blood vessels. The Spectrum Long Pulsed Yag and Intense Pulsed Light (IPL) targets and removes these unsightly blemishes leaving behind a blemish free appearance.

## Improve Skin Tone and Texture

Erbium Yag Laser skin resurfacing helps to improve an assortment of conditions such as sun damage, scars, fine lines & wrinkles. Rejuvenate your skin and turn back the hands of time.

## Mistakes Can Be Corrected

The Spectrum laser uses "Gold Standard" Q-Switched technology to remove unwanted tattoos. The dual wavelength laser targets specific ink colors. The tattoo ink is then broken down into tiny particles that are small enough so that the body's own natural immune system can flush them away. Unwanted body art can now be eliminated.

## Hair Today, Gone Tomorrow

The Spectrum diode laser will reduce and may permanently remove unsightly body hair. Melanin gives our hair color and is what the laser light targets to destroy the hair follicles in the active growth stage. It is safe to use on all skin colors and will leave the treatment area "Hair Free."

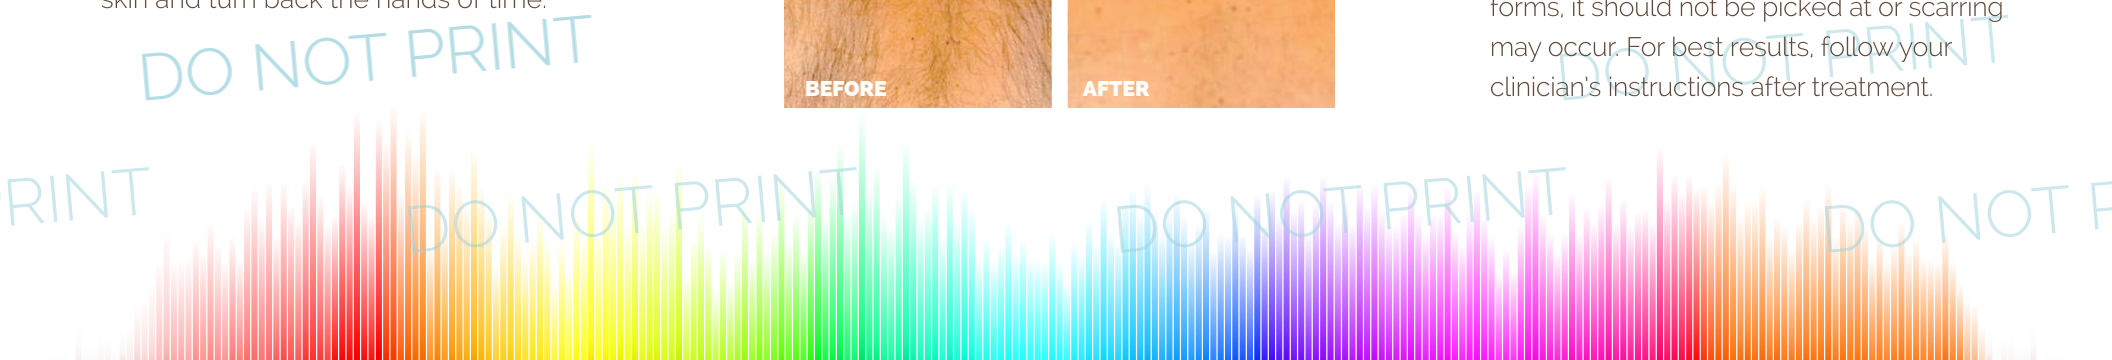

# Schedule Your Consultation

For your first consultation, come prepared with clear details on what improvements you are looking to attain. A medical record of your skin condition will be required, and you will want to mention any sensitivities, infections, or prior skin treatments. Along with your history, your skin type and pigmentation will be examined in order to determine the best treatment to reach your desired goals.

## About Recovery

Depending on the area treated, some swelling and irritation may occur. However, the majority of treatments have little to no down time and few side effects. Avoid sunlight and use sunscreen or antibiotic ointments to promote healing and prevent damage. Anti-aging skin care products may be prescribed by your doctor. If a scab forms, it should not be picked at or scarring may occur. For best results, follow your clinician's instructions after treatment.

# Mark Rohrer

Founder and President of  
Rohrer Aesthetics, LLC

My name is Mark Rohrer. I founded my first company, Sandstone Medical Technologies, LLC in 2000. Sandstone Medical provided affordable aesthetic lasers and IPL systems. In 2012, I sold the assets of Sandstone Medical to Ellman International, (a Cynosure Company). Cynosure Inc. now sells the complete Sandstone Medical product line.

In November of 2014, I established my second company, Rohrer Aesthetics, LLC. Rohrer Aesthetics is committed to meeting the physician's aesthetic laser/IPL needs. I will continue to furnish the aesthetic community with high quality products that provide patients with excellent results and allow physicians the opportunity to realize a return on their investment.

I am proud to introduce the Spectrum as our flagship product. The Spectrum features 4-different laser wavelengths and 4-different IPL wavelengths. It truly is a multi-platform work station that can be used to perform most aesthetic laser/IPL procedures. It is portable and best of all AFFORDABLE. I hope you enjoy flipping through the pages of this brochure.

Thank you for considering Rohrer Aesthetics, LLC for all of your laser and IPL needs.

# Hair Removal

# Laser Hair Removal (810nm Diode)

Unwanted body hair is a problem that everyone experiences. This is why hair removal has become the #1 non-invasive aesthetic procedure. The Spectrum uses an 810nm diode laser to remove and permanently reduce unwanted body hair. The pulse repetition rate can be adjusted up to 10-pulses per second allowing both small and large areas to be treated fast and effectively. The 810nm-diode can be used on all skin types.

# Skin Resurfacing

# Laser Skin Resurfacing (Erbium Yag 2940nm)

In today's society people are eating healthier and exercising more. They desire to remove fine lines and pigmented lesions that hinder their appearance. The Erbium Yag laser uses a less invasive approach for treating superficial wrinkles and sun damaged skin. An Erbium Yag laser procedure involves minimal downtime and delivers great results for mild to moderate skin wrinkling and dyschromia. The Erbium Yag treatment is gentle and safe, and can be used on the neck, chest, hands and face with minimal risk.

# Vascular Reduction

# Vascular Reduction (nd:Yag 1064nm)

Why suffer needlessly with unsightly veins on the face and legs? The Spectrum's long pulsed nd:Yag laser will diminish the appearance of existing veins. The 1064nm laser light is delivered through the skin and into the vein. The energy is absorbed and the vein walls collapse and seal shut. Eliminating veins with the Spectrum 1064nm laser is quick and effective for most individuals. Treatments work best on smaller veins (3mm or less).

# Tattoo Removal

# Tattoo Removal Q-Switched (1064nm/532nm)

The total number of Americans that have at least one tattoo exceeds 45 million. For multiple reasons, body art may become undesirable. A Q-switched laser is the most frequently used laser for tattoo removal. The laser "fractures" the pigment into particles small enough for the ink to be removed using the body's natural filtering system. The Spectrum's Q-switched 1064nm/532nm laser can effectively remove an array of tattoo ink colors with minimal risk. (Multiple treatments maybe required).

# Intense Pulsed Light

IPL SR 540nm

IPL AR 450nm

IPL VR 510nm

IPL HR 650nm

IPL HR 650nm

IPL **SR** 540nm

IPL **AR** 450nm

IPL **VR** 510nm

IPL **HR** 650nm

# Intense Pulsed Light (IPL)

The Spectrum's IPL can be used for a myriad of different treatments including hair reduction, acne reduction and the removal of vascular and pigmented lesions. The Spectrum's IPL includes 4 broad band filters. Each filter provides non-coherent energy that targets specific chromophores. The treatments are non-ablative and gentle by nature. The Spectrum IPL performance provides efficacy and versatility leaving patients with healthy and more youthful skin.

# The Spectrum

# The Spectrum Laser/IPL is versatile and portable

The Spectrum is the ideal laser/IPL system for sharing or for physicians with multiple office locations.

The System easily separates into two pieces and placed into the trunk or back of an SUV.

Transporting the Spectrum does not void the 2-year warranty.
